

U.S.S.N. 09/449,001
Group Art Unit: 2684

AMENDMENTS TO THE CLAIMS

1. (Currently Amended) A system for allowing a subscriber to a prepaid communication service to roam between different service markets, the system comprising

a serving mobile switching center capable of communicating with the subscriber's phone unit and capable of generating a request for a profile associated with the subscriber,

a location register in communication with the serving mobile switching center and in communication with a home location register associated with the subscriber profile, the location register being capable of: collecting the subscriber profile, determining whether a prepaid platform is associated with a market for ~~and capable of identifying a class of market associated with the mobile switching center, whereby the location register can~~ and modifying the subscriber profile as a function of the identified class of ~~based on whether a prepaid platform is associated with the market for the mobile switching center for controlling the services provided to the~~ subscriber, and

a prepaid platform capable of performing call processing for a call associated with the subscriber.

2. (Currently Amended) A system according to claim 1, wherein the location register includes a database having information representative of class of markets prepaid platforms ~~class of markets~~ associated with a plurality of markets capable of servicing the subscriber.

3. (Currently Amended) A system according to claim 1, wherein the location register includes a messaging processing unit for processing a message from the mobile switching center to identify a class of market prepaid platform ~~class of market~~ associated with the market for ~~market~~ mobile switching center.

4. (Previously Amended) A system according to claim 1, wherein the mobile switching center includes a profile request service capable of requesting a user profile in response to an NPA/NXX signal representative of the subscriber being a prepaid customer.

5. (Original) A system according to claim 1, wherein the location register includes a memory space for storing information representative of a location associated with the subscriber.

6. (Original) A system according to claim 1, wherein the location register includes means for providing a home location register with information representative of a location associated with the subscriber.

7. (Original) A system according to claim 1, wherein the location register includes means for passing through registration requests for subscribers identified as not-prepaid subscribers.

U.S.S.N. 09/449,001
Group Art Unit: 2684

8. (Original) A system according to claim 1, wherein the location register includes means for requesting subscriber location information from a home location register associated with the subscriber.

9. (Original) A system according to claim 1, wherein the location register is in communication with the prepaid platform for delivering subscriber location information to the prepaid platform.

10. (Original) A system according to claim 1, wherein the location register includes means for communicating with a visitor location register to allow call termination for a call.

11. (Previously Amended) A system according to claim 1, wherein the location register includes an error reporter for reporting detected error conditions to the prepaid platform.

12. (Currently Amended) A system for processing calls from a subscriber, the system comprising:

a mobile switching center capable of communicating with a subscriber phone unit and requesting a subscriber profile,

a location register capable of: accessing the subscriber profile, ~~identifying~~ determining whether a ~~class of prepaid platform is associated with a market associated with~~ for the mobile switching center, modifying the subscriber profile based on the identified class of whether a prepaid platform is associated with the market, and providing the modified subscriber profile to the ~~serving~~ mobile switching center, and

a prepaid platform capable of: communicating with the mobile switching center and performing call processing for a subscriber call.

13. (Currently Amended) A system according to claim 12, wherein the location register includes a database having information representative of ~~class of markets~~ prepaid platforms associated with a plurality of markets capable of servicing the subscriber.

14. (Currently Amended) A system according to claim 12, wherein the location register includes a messaging processing unit for processing a message from the mobile switching center to identify a ~~class of market~~ prepaid platform associated with the market for the mobile switching center.

U.S.S.N. 09/449,001
Group Art Unit: 2684

15. (Previously Added) A system according to claim 12, wherein the mobile switching center includes a profile request service capable of requesting a user profile in response to an NPA/NXX signal representative of the subscriber being a prepaid customer.

16. (Previously Added) A system according to claim 12, wherein the location register includes a memory space for storing information representative of a location associated with the subscriber.

17. (Previously Added) A system according to claim 12, wherein the location register is capable of providing a home location register with information representative of a location associated with the subscriber.

18. (Currently Amended) A system according to claim 12, wherein the location register is capable of passing through requests for subscribers identified as non-prepaid subscribers.

19. (Previously Added) A system according to claim 12, wherein the location register is capable of requesting subscriber location information from a home location register associated with a subscriber.

20. (Previously Added) A system according to claim 12, wherein the location register is capable of communicating with a visitor location register to allow call termination for a call.

21. (Currently Amended) A method for processing calls from a subscriber, the method comprising:

determining identifying whether a prepaid platform is associated with a class of market associated with for a mobile switching center, wherein the mobile switching center receives a call associated with the subscriber; and,

based on whether a prepaid platform is associated with the identified class of market, modifying a profile associated with the subscriber to route the call to a prepaid platform.

22. (Previously Added) The method of claim 21, wherein the call originates from at least one of a mobile telephone and a landline.

23. (Currently Amended) The method of claim 21, wherein modifying the profile associated with the subscriber comprises:

modifying the profile associated with the subscriber to route the call to at least one of a prepaid platform located in the market associated with for the mobile switching center and a prepaid platform located in a market different than the market associated with for the mobile switching center.

U.S.S.N. 09/449,001
Group Art Unit: 2684

24. (Currently Amended) The method of claim 21, wherein modifying the profile associated with the subscriber comprises:

modifying the profile associated with the subscriber to route the call to a prepaid platform located in the market associated with for the mobile switching center for the mobile switching center to complete the call.

25. (Previously Added) The method of claim 21, wherein modifying the profile associated with the subscriber comprises:

modifying the profile associated with the subscriber to route the call to a hotline number.

26. (Currently Amended) The method of claim 21, wherein modifying the profile associated with the subscriber comprises:

modifying the profile associated with the subscriber to include a hotline number for a prepaid platform located in a market different than the market associated with for the mobile switching center.

27. (Previously Added) The method of claim 26, wherein the hotline number comprises a toll free telephone number on a public switched telephone network.

28. (Currently Amended) A method for processing calls for a subscriber, the method comprising:

receiving a request for a profile associated with the subscriber, wherein the subscriber makes a call in a roaming market;

determining identifying whether a prepaid platform is class-of-market associated with the roaming market; and,

based on the identified class of whether a prepaid platform is associated with the roaming market, modifying the profile associated with the subscriber to route the call to a prepaid platform.

29. (Previously Added) The method of claim 28, wherein modifying the profile associated with the subscriber comprises:

modifying the profile associated with the subscriber to route the call to at least one of: a prepaid platform located in the roaming market and a prepaid platform located in a market different than the roaming market.

30. (Previously Added) The method of claim 28, wherein modifying the profile associated with the subscriber comprises:

U.S.S.N. 09/449,001
Group Art Unit: 2684

modifying the profile associated with the subscriber to route the call to a prepaid platform located in the roaming market for a mobile switching center in the roaming market to complete the call.

31. (Previously Added) The method of claim 28, wherein modifying the profile associated with the subscriber comprises:

modifying the profile associated with the subscriber to route the call to a hotline number.

32. (Previously Added) The method of claim 28, wherein modifying the profile associated with the subscriber comprises:

modifying the profile associated with the subscriber to include a hotline number for a prepaid platform located in a market different than the roaming market.

33. (Currently Amended) A method for processing calls from a subscriber, the method comprising

receiving, at a mobile switching center, a call associated with the subscriber;

requesting, from a home mobile switching center, a profile associated with the subscriber;

determining whether a prepaid platform is associated with a class of market
associated with for the mobile switching center; and,

based on the identified class of whether a prepaid platform is associated with the market,
modifying the profile associated with the subscriber to route the call to a prepaid platform.

34. (Currently Amended) The method of claim 33, wherein modifying the profile associated with the subscriber comprises:

modifying the profile associated with the subscriber to route the call to at least one of: a prepaid platform located in the market associated with for the mobile switching center and a prepaid platform located in a market different than the market associated with for the mobile switching center.

35. (Currently Amended) The method of claim 33, wherein modifying the profile associated with the subscriber comprises:

modifying the profile associated with the subscriber to route the call to a prepaid platform located in the market associated with for the mobile switching center for the mobile switching center to complete the call.

36. (Previously Added) The method of claim 33, wherein modifying the profile associated with the subscriber comprises:

U.S.S.N. 09/449,001
Group Art Unit: 2684

modifying the profile associated with the subscriber to route the call to a hotline number.

37. (Currently Amended) The method of claim 33, wherein modifying the profile associated with the subscriber comprises:

modifying the profile associated with the subscriber to include a hotline number for a prepaid platform located in a market different than the market ~~associated with~~ for the foreign mobile switching center.

38. (Currently Amended) A processor program for processing calls from a subscriber, the processor program being tangibly stored on a processor-readable medium and comprising instructions operable to cause a processor to:

determine identify whether a prepaid platform is associated with a class of market associated with for a mobile switching center, wherein the mobile switching center receives a call associated with the subscriber; and,

based on ~~the identified class of~~ whether a prepaid platform is associated with the market, modify a profile associated with the subscriber to route the call to a prepaid platform.

39. (Currently Amended) The processor program of claim 38, wherein the instructions to modify a profile associated with the subscriber to route the call to a prepaid platform comprise instructions to:

modify the profile associated with the subscriber to route the call to at least one of a prepaid platform located in the market ~~associated with~~ for the mobile switching center and a prepaid platform located in a market different than the market ~~associated with~~ for the mobile switching center.

40. (Currently Amended) The processor program of claim 38, wherein the instructions to modify a profile associated with the subscriber to route the call to a prepaid platform comprise instructions to:

modify the profile associated with the subscriber to route the call to a prepaid platform located in a the market ~~associated with~~ for the mobile switching center.

41. (Previously Added) The processor program of claim 38, wherein the instructions to modify a profile associated with the subscriber to route the call to a prepaid platform comprise instructions to:

modify the profile associated with the subscriber to route the call to a hotline number.

U.S.S.N. 09/449,001
Group Art Unit: 2684

42. (Currently Amended) The processor program of claim 38, wherein the instructions to modify a profile associated with the subscriber to route the call to a prepaid platform comprise instructions to:

modify the profile associated with the subscriber to include a hotline number for a prepaid platform located in a market different than the market associated with for the mobile switching center.

43. (Previously Added) A method for routing a call, the method comprising:

determining whether a prepaid platform is associated with a market for a mobile switching center receiving the call; and,

based on whether a prepaid platform is associated with the market for the mobile switching center receiving the call, routing the call to at least one of a hotline number and a prepaid platform associated with the market for the mobile switching center.

44. (Previously Added) The method of claim 43, wherein the call originates from at least one of a mobile telephone and a landline.

45. (Previously Added) The method of claim 43, wherein the hotline number comprises a toll free telephone number on a public switched telephone network.

46. (Previously Added) The method of claim 43, wherein routing the call to at least one of a hotline number and a prepaid platform associated with the market for the mobile switching center comprises:

modifying a profile associated with a subscriber for the call to route the call to at least one of a hotline number and a prepaid platform associated with the market for the mobile switching center.

47. (Previously Added) The method of claim 43, wherein routing the call to a prepaid platform associated with the market for the mobile switching center comprises:

routing the call to a prepaid platform associated with the market for the mobile switching center to allow the mobile switching center to complete the call.

48. (Previously Added) The method of claim 43, wherein routing the call to a prepaid platform associated with the market for the mobile switching center comprises:

modifying a profile associated with a subscriber for the call to route the call to a prepaid platform associated with the market for the mobile switching center to allow the mobile switching center to complete the call.

U.S.S.N. 09/449,001
Group Art Unit: 2684

49. (Previously Added) The method of claim 43, wherein routing the call to a hotline number comprises:

routing the call to a hotline number to a prepaid platform associated with a market different than the market associated with the mobile switching center.

50. (Previously Added) The method of claim 43, wherein routing the call to a hotline number comprises:

modifying a profile associated with a subscriber for the call to include a hotline number for a prepaid platform associated with a market different than the market associated with the mobile switching center.

51. (Previously Added) A processor program for routing a call, the processor program being tangibly stored on a processor readable medium and comprising instructions operable to cause a processor to:

determine whether a prepaid platform is associated with a market for a mobile switching center receiving the call; and,

based on whether a prepaid platform is associated with the market for the mobile switching center receiving the call, route the call to at least one of a hotline number and a prepaid platform associated with the market for the mobile switching center.

52. (Previously Added) The processor program of claim 51, wherein the instructions to route the call to at least one of a hotline number and a prepaid platform associated with the market for the mobile switching center comprise instructions to:

modify a profile associated with a subscriber for the call to route the call to at least one of a hotline number and a prepaid platform associated with the market for the mobile switching center.

53. (Previously Added) The processor program of claim 51, wherein the instructions to route the call to a prepaid platform associated with the market for the mobile switching center comprises instructions to:

route the call to a prepaid platform associated with the market for the mobile switching center to allow the mobile switching center to complete the call.

54. (Previously Added) The processor program of claim 51, wherein the instructions to route the call to a prepaid platform associated with the market for the mobile switching center comprises instructions to:

U.S.S.N. 09/449,001
Group Art Unit: 2684

modify a profile associated with a subscriber for the call to route the call to a prepaid platform associated with the market for the mobile switching center to allow the mobile switching center to complete the call.

55. (Previously Added) The processor program of claim 51, wherein the instructions to route the call to a hotline number comprise instructions to:

route the call to a hotline number to a prepaid platform associated with a market different than the market associated with the mobile switching center.

56. (Previously Added) The processor program of claim 51, wherein the instructions to route the call to a hotline number comprise instructions to:

modify a profile associated with a subscriber for the call to include a hotline number to a prepaid platform associated with a market different than the market associated with the mobile switching center.
